

CASTLE VETERINARY GROUP
FARM NEWSLETTER MAY '15

Why you should be treating for flies
NOW

The adult flies you see make up just 15% of the total population on farm. Don't delay your treatment until there are large numbers of flies as by this point there will be many eggs and larvae. We have already had farmers reporting cases of fly strike.

Treat now before the population explodes and think about re-treating every 4 weeks.

Spotinor treats the following:

Cattle 10ml dose – treats flies and lice.
Meat withdrawal 17 days. Milk 0 hours.

Sheep 5ml dose, Lambs under 10kg or 1 month of age 2.5ml dose – treats blowfly strike, lice, ticks and keds.
Meat withdrawal 35 days.

Spotinor can be ordered in on request at the following Cash Sale prices:

250ml = £30.02 Ex Vat

500ml = £ 51.27 Ex Vat

1 litre = £92.12 Ex Vat

2.5 litres = £204.21 Ex Vat

Nematodirus Alert!

The red zones show areas currently at risk of Nematodirus:

This gut worm causes profuse scour and sudden death in grazing lambs. Protect from Nematodirus by not grazing fields used by lambs last spring. Where this is not possible the treatment of choice remains white Group 1 wormers. Bring a dung sample into Sami 10 days after treatment so she can check for Teladorsagia (another gut worm) which may be resistant to the white wormer.

Half the herd

Fertility testing bulls is now recognised as a sensible precaution before turning the bull in with the cows. We recommend checking bulls 2 months before their intended use. This gives you time to source and test a replacement and still not upset your future calving pattern.

For those of you fresh to the procedure this is what we require

- A bull (or bulls)
- A crush capable of restraining the bull and to allow safe access under the belly of the bull for collection of a sample
- A table or flat surface that can be positioned close to the crush, out of the wind so a microscope can be set up for examination of the sample.
- Electricity for the microscope.

We charge £89.98 Ex Vat for the first bull tested and £67.49 Ex Vat for each extra bull test on the same visit. If you have a lot of bulls to test we can discuss a half day or day rate.

Bilovet

We are now stocking a new Tylosin to the market. Bilovet is a cheaper alternative to Tylan with an identical meat Withdrawal of 28 days for cattle, 9 days for pigs and just a slightly longer milk withhold of 5 days.

The following products can be ORDERED IN on request:
